About PULSUS

Plant Genomics is the branch of molecular biology which is an evolutionary field of study that has gained rapid development of advanced research and data management tools in the past years. The recent advancement in technologies have integrated our ability to analyze and understand plant genomes and its vital role in sustaining life on earth. The sustainable production of raw materials for food, nutrition, fiber, feed, medicines and fuel can be achieved only through the study of Plant Genome and Plant Sciences. Therefore, research in plant science needs more attention and investment from both public and private sector agencies to fund for developing next-generation agricultural materials for keeping a secure and sustainable future.
